

Description

The **LightMap Fusion Pro** provides a comprehensive solution for static lighting management in Unity. It offers a suite of tools that efficiently combine lightmaps, skybox, fog, and reflection probes, making it user-friendly and performance-optimized, especially for mobile platforms and VR. It's particularly advantageous for projects requiring lighting modifications or those aiming for enhanced control over scene lighting quality.

What's included

The tool enables you to combine up to four lightmaps in a Unity scene. This feature is useful for achieving lighting change effects without needing dynamic lights.

Main features:

- **Material Management:** "Maintain control at all times." The tool features "Material Manager" and "Material Converter" functions that enable automatic management of the materials required for its operation.
- **Versatility and ease of use:** Supports up to 4 different lighting sets with easy setup, adjustment, and management within the Unity scene.

- **Light Bake Process**

The tool executes the light bake process to compute global illumination (GI) and produce the lightmaps.

- Lightmap management.
- Skybox mixing and control: The tool allows to mix up to 4 different types of skyboxes.
- Fog mixing and control: Now, the tool also allows you to adjust the fog parameters in the scene. You can change the density, color and other aspects of the fog to synchronize it with lighting changes.
- Scene Reflection mixing via Reflection Probes
- Toolbar inside the Unity viewer that allows you to switch lighting states.
- Integration with Unity Timeline Tools for Blending Lighting States (Light Sets)
- Built-In and Universal Render Pipeline support with coverage for most common shader types
- **MatCap Shaders and 640+ Texture Library**
 - Enhance your 3D projects with our extensive library of MatCap shaders and over 640 high-quality textures. Whether you are creating realistic materials or stylized art, our selection provides versatile tools for artists and developers
